

8 SIGNS YOU CHOSE A GREAT IT COMPANY

An excellent IT company will take your organization to the next level. How do they do that? Discover the eight signs to look for when choosing that company.

When partnering with the right IT organization, you will enjoy many benefits. Including expert services, leverage innovations, cost savings, gaining a competitive edge, and satisfied clients.

Many providers claim they are the right fit for you, and they will help you achieve your objectives. But how can you identify an excellent IT company? This article will help you spot them using our eight signs.

What Are The Signs Of A Great IT Company?

1. They Are Available 24/7: IT emergencies do not follow a regular schedule. They can happen at any time. Once you encounter an IT issue, your next step is to contact technical support. The IT company is reachable to address or clarify your concerns at any time, via a number of different methods:

- Ticket system
- Telephone
- Email support
- Chat & instant messaging
- And more

The IT company should provide contact methods that match your preferences, whether that's a phone line, a chat feature, or otherwise. They will monitor these channels and provide quick feedback. That helps you avoid frustrations and potential losses.

2. They Will Prioritize Cybersecurity:

Statistics show that over 60% of breaches happened where the organization knew of the vulnerability but did not patch it.

The average cost of a breach is well over \$3 million. Can you afford this expense? A great IT company is proactive in prioritizing cybersecurity and saving you from the consequences of a potential breach.

Your IT company will help you in these ways:

- Train your employees to identify threats and aggressively report suspicious activity.
- Partner with you to develop reliable cybersecurity measures.

- Provide you proactive solutions to safeguard the IT infrastructure across the network.
- Update your cybersecurity protection to address each warning and potential threat.
- Conduct frequent assessments to identify and address vulnerabilities.

3. Provide Proactive IT Services and Support:

Many organizations use IT solutions to achieve their objectives. Your competitors use them to gain a competitive advantage over your organization. A great IT company provides proactive technical services and support to ensure you remain competitive and help you achieve your goals.

Being proactive also means being engaged in your organization's success on an ongoing basis. You want more than an IT company that only gets in touch when you have issues. A great IT company will take time to understand your challenges and have regular check-ins to discuss and plan your IT strategy.

Your IT company will provide proactive services and support in these ways:

- Identify and guide you on IT innovations that can take you to the next level.
- They do regular maintenance to identify and fix infrastructure issues early.
- Advise you on technology investments that give you a competitive edge.

4. They Have Excellent Reviews From Clients:

Their client reviews reveal a lot about the company. They can tell you whether the IT firm satisfies its clients' needs.

Would you want to partner with an IT company that doesn't help their clients? A great IT firm has excellent reviews. They listen to the client and help them exceed their expectations. Your organization can relax, knowing the service provider has a track record of satisfying their clients.

You can check the clients' reviews on various platforms such as:

- Search engines and professional websites
- Social media platforms
- Some company pages
- Contacting previous clients

5. They Provide Expert Services for Your Industry:

Firms in different sectors have varying IT needs. For example, medical institutions need HIPAA compliant services to safeguard protected health information. Other firms may require a higher degree of cybersecurity protection.

Working with an IT company that provides the expert services that your industry needs enables you to get the solutions you want. Their support will help your organization achieve each objective.

An IT company can be an expert in your industry if:

- It has experience working with your industry's organizations.
- The company knows and meets your sector's specific requirements and regulations.
- It has professionals that your industry is looking to partner with to fulfill the needs.

6. Provides Flexible Arrangements:

Your IT partnership will be flexible. They will not back you into a corner where you must take their services as agreed upon in the initial contract.

While IT companies may require express terms, they should treat your arrangement as a partnership and help you succeed. Flexible arrangements can help your organization. When you need to revise the contract, the updates will support your current technology needs.

An IT company can provide flexible arrangements in these ways:

- Leave an exit clause for you if they do not satisfy your needs.
- Be open to amending the contract if you scale.
- They offer some free services, such as consultations.

7. They Offer Services With Transparent Pricing: A great IT organization provides transparent pricing.

They will not send unauthorized invoices or statements. In your contract, it will state your monthly charges. It will also list what is and is not covered. That billing enables you to plan your expenditures to ensure they account for essential services.

An IT company's fees can be an issue if:

- They send unexpected bills, such as charges for services beyond your arrangement.
- You received an invoice for services not performed or authorized.

8. They Have An Expert, Well-Rounded Team: Truly effective IT companies are more than a "one-man operation".

While these individual IT professionals used to be more commonplace, nowadays you'll want to look for an IT company with a full team, ensuring their availability isn't subject to one person's schedule. In the event that one team member is on vacation or sick, another can take over their duties, which provides seamless continuity of support.

Have You Chosen A Great IT Company?

Your organization wants an IT firm you can trust to offer services and support that help you achieve your objectives. Orion Networks is an IT company that will help you do that.
